SAVE WITH THE

BAVTRAK 009

Save on skip hire.

Save on aggregate and  
hardcore deliveries.

Save on manual  
labour costs.

Save on time.

Recycling rubble on compact job sites has never been easier than with the BAVTRAK 009. With its generous, 359 x 315mm jaw feed area and fully hydrostatic crusher mechanism the 009 effortlessly processes rubble.

## POWERFUL AND DURABLE

The quiet, powerful and easy to maintain engine provides effortless performance and reliability.

The BAVTRAK 009 is compatible for hand or machine loading on the very tightest of job sites.

Lightweight and manoeuvrable, mounted on rubber tracks, the 009 is ideal for urban and sub-urban areas.

## EASILY ADJUSTABLE

With the BAVTRAK 009, you have complete control of product sizing. Crushing output size can be adjusted to one of three grades within seconds, without the need for any special tools, using a simple adjuster lever.

The processed grade of the material can be tailored to suit the job requirements.

Large 359 x 315mm jaw feed area.  
Patented Safety Cover mechanism.  
Fast, simple grade adjustment.  
Safe and easy to use on site.

THE BAVTRAK 009

SAVES TIME AND MONEY

**Environmental awareness is driving new legislation and increasing the cost of building site waste disposal, as well as quarried aggregates. Recycling, where possible, is preferable to moving waste off-site.**

Additionally, crushing on site frees-up space dedicated to skips.

Job times are better controlled as they are no longer reliant on collections of waste rubble and deliveries of aggregates and stone.

Damage and environmental nuisance caused by vehicle traffic to and from site are reduced greatly.

Year by year, environmentally led taxes will increase the economic case for good waste management and recycling practice on site.

Small enough for compact job sites.

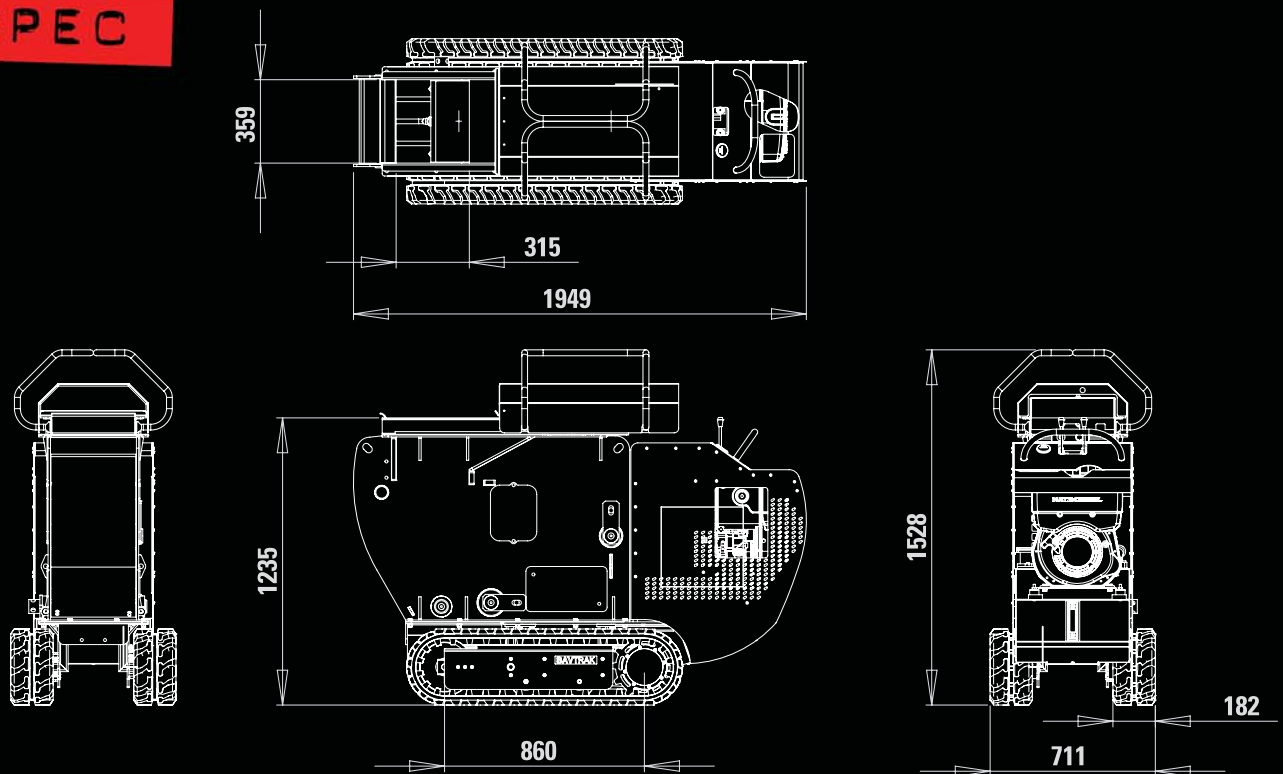

Big enough for 'real-world' rubble processing.

Fast enough for efficient, on-site recycling.

Durability and reliability to ensure profit.

BAVTRAK 009

SPEC

**The British designed and manufactured 009 has reliability and ease of maintenance built-in.**

Engine: 7.7KW (10.5HP) Hatz, air cooled diesel, or 9.6KW (13HP) Honda, air cooled petrol (optional)

Transmission: hydrostatic

Hydraulic tank: 60 litres

Weight: 935kg

Plus:

- Patented Feed Hopper Safety Cover
- 359 x 315mm jaw feed area

We have been designing crushers since 1999 and can also provide excavator mounted BAV Alligator Crusher attachments, which allow you to reduce larger sections prior to feeding into your BAVTRAK.

BAV Alligator Crusher attachments also cut reinforcing wires and bars.

Our patented feed hopper safety cover system ensures crushing only begins when the cover is shut. This protects users from debris and dust, but most importantly from trapping and crushing within the jaws. This, combined with the unique 'crush-and-lay' output system, ensures the 009 creates minimal dust on site.
